The residential grade paint that is most like the coating we use is Sherwin Williams Duration. Our gloss level is 25 degrees - between flat and satin finish.

Please note that due to the substrate and paint of your choice of paint an exact match is not guaranteed.

What Kind of Paint do we Use?

Our Polar colors paint is a low gloss, two-component, acrylic polyurethane providing excellent durability, mar resistance and color retention. Applied on our fiberglass window frames it has excellent adhesion properties - you can expect years of low maintenance enjoyment.

In the event of any scratches or chips the surface can be easily touched up, or even repainted if required

Our 10-year warranty provides coverage for any paint cracking, blistering or peeling. Gloss retention and fading is dependent on the elevation and exposure.
